Me and My Micro

Learn how to start writing programs for your computer.
Inc Free Book

£1.00

Complete Cocktail Maker

Have the ability to concoct over 300 different drinks to suit every mood and taste

£1.00

COLOSSUS BRIDGE

Allows one player to play Bridge with the computer, Blackwood, Stayman & Baron conversions

£8.50

FIRST STEPS WITH MR. MEN

Simple and absorbing games (4-8 yrs) for early learners when starting to read

£4.99

HERE AND THERE WITH MR. MEN

These games (4-8 yrs) are designed to teach children about giving directions and plan simple routes.

£4.99

Watch Your Weight

A weight loss program which will choose an appropriate diet to fit all individuals - Inc Calorie Counter

£1.00

XOR

Ultimate maze challenge. Logical thinking strategy and tactical problem solving are required. No time limit to solve the puzzles

£2.99

DARE DEVIL DENIS

Fancy being a stunt man? Try your skills against the hazards using a motorbike

£1.99

PEDRO

Stop the animals eating Pedros plants by blocking off the maze exits and catching the animals. Very addictive

£1.99

Turtle Graphics

Teaches Geometry, Mathematics and graphics at elementary level

£2.25

EDUCATIONAL OFFER

All 4 Ivanberg revision packs - covers all GCE-GCSE topics + syllabus. Maths 1+2, English 1 + Biology 1

£5.00 complete

ROM CARTRIDGES

Viewsheet £11.95
View £11.95
Logo £28.50

WORKSHOP

Provides a micro world in which to discover what each of the programs amazing "Machines" can do with simple shapes. Lively replay sequence for young learners. Ages 3-8

£1.50

POWER PACK 2

Another 7 Great Games Includes: Psycastria, Thunderstruck, Stix, Saracod, Last of the Free, Froot Raid, Drain Mania

£4.50

SPYCAT SUPER OFFER

Arcade adventure - discover secret passages, hatches and lifts in 10 Drowning Street. A good captivating game

£4.75

TALKBACK

This program allows users to create simple conversations on the screen. Provides valuable lessons in English and computer literacy - very entertaining. Age 10+

£1.50

PLAY IT AGAIN SAM 8

Contains: Mr. Wiz, Quest, Winter Olympiad, Repton 40 screens

CONTENTS

Cover Story

36 Morse Code

Teach yourself this fascinating language with our easy-to-use tutor written in Basic.

5 News

The Electron is still growing, so catch up here on all the latest developments. Plus the popular Gallup software chart.

7 Database

Create your own custom designed card index with this menu-driven utility.

11 Discovery

Explore and examine ADFS discs with this handy Basic routine. Plus more documented osword calls.

13 Circle

This new operating system command added to your micro will pep up its graphics facilities.

14 Software

Holed Out and Sam 7 are among the top-selling games reviewed this month by our expert panel.

19 Tape transplants

We show how to build up your own library of games tapes from compilations.

21 Tic Tac Rhymes

Test your knowledge of nursery rhymes in this educational game for young children.

24 Adventures

Pendragon offers advice and a helping hand to those stuck in far away and ancient lands.

29 Duel

Lost in space? Battle with aliens among the stars in this type-in arcade game.

32 Arcade Corner

Part one of a two part complete map to Superior Software's Palace of Magic.

39 Mail

The pages you write yourselves. A selection of the best letters from our mailbag.

Back to school

10 educational
games for the
Electron for just £5.95

Learning has never
been such fun!

fun school

Fun School 2 for Over-8s contains:

- **Build a Bridge:** Shape-fitting challenge
- **Passage of Guardians:** Enjoy anagrams
- **Unicorn:** First steps in problem solving
- **Logic Doors:** Mapping made easy
- **Souvenirs:** An introduction to travel
- **Code Boxes:** Discover binary arithmetic
- **Mystery machine:** Have fun breaking codes
- **Escape:** A final check on progress

Fun School 2 for 6 to 8 year olds contains:

- **Number train:** Calculations made enjoyable
- **Shopping:** Which shops for which products?
- **Maths Maze:** Fun improving arithmetical skills
- **Treasure Hunt:** Introduction to coordinates
- **Bounce:** Get to grips with angles
- **Packing:** Discover tessellating shapes
- **Caterpillar:** Word building challenge
- **Number Jump:** Have fun practising tables

Fun School 2 for Under-6s contains:

- **Shape Snap:** Colourful shape recognition
- **Find the Mole:** Experiment with number sizes
- **Teddy Count:** Ideal introduction to number sizes
- **Write a Letter:** Creative fun at the keyboard
- **Colour Train:** Play at spotting colours
- **Pick a Letter:** Word building made easy
- **Spell a Word:** Word building made easy
- **Teddy Bears Picnic:** Move around a maze

Now children can really have fun while learning. Fun School 2, designed by a team of educationalists, is available for three age groups: Under-6s, 6-8 year olds and Over-8s. Each pack comes with eight colourful and exciting programs, a colourful button badge and detailed instructions giving educational help.

The computer itself monitors the child's progress. The skill level - initially set by parents - is automatically adjusted to suit the child's ability.

Now children can enjoy using their parents' computer while they learn at their own pace.

Available for:

Spectrum, Commodore 64,
Amstrad CPC, BBC Micro/Electron
£9.95 (tape) £12.95 (disc).

Also: Atari ST, Amiga, PC £19.95
(PC version released in May)

electron user NEWS

Software firms join forces to boost games

THE UK's top entertainment software houses have joined forces to boost the popularity of computer games and to wage war on software piracy.

Officially launched at the European Computer Trade Show, the Entertainment Software Publishers Association aims to improve the environment for the games software industry by developing and promoting cooperation among competing companies.

Not only will these changes be aimed at the industry but they will also have an impact on the games-playing public through the media.

The new body will forge close links with FAST, the Federation Against Software Theft. It was

Pictured at the launch of the Entertainment Software Publishers Association are from left to right, Simon Treasure, Cheryl Davis of Washington DC who is membership secretary of the Software Publishers Association of America, and the first chairman of the ESPA, Andrew Hewson

conceived by independent consultant Simon Treasure and is chaired by head of software house Hewson, Andrew Hewson.

One problem surrounds the choice of name. The initials ESPA are already used by an educational body.

BEEFY star Arnold Schwarzenegger comes to the Electron on June 1 when Superior Software brings out its new game Predator. With the conversion carried out by Peter Scott of Last Ninja fame, it should be well received. Price, £9.95.

Electrons can help Oxfam

ELECTRON users have been called on to help combat the scourges of famine, war and illness in the developing world.

Oxfam has made a special appeal for donations of spare software, peripherals or hardware with a target of £20,000 to help its work around the world.

"We would be particularly pleased to receive Electron software since there is such a faithful following for this machine", said Oxfam's appeals manager Richard English.

"Software programs for the Electron are not so numerous as for some other machines, and could be looked upon by some people as collectors' items. We would be able to sell them on well to help our work".

Oxfam is the UK's leading international voluntary agency, with a chain of more than 900 shops nationwide.

"I can assure anyone making a donation that it will be put to good use", said Richard English. "Poor communities will have desperately needed clean water, tools and seeds - the means to free themselves from hunger".

Anyone with software to donate can take it along to their local Oxfam shop or send it to the London HQ at 59 St Johns Hill, Clapham Junction, SW11 1VJ.

Sam's still playing well

THE ubiquitous Sam is playing it yet again for Superior Software (0532 459453), bringing a couple of new games for the Electron.

Leeds-based Superior has stuck to its tried and tested compilation formula to bring Electron users Play It Again Sam 8 and 9. Sam 10 is due on June 8.

Will number 10 be the end of the line for Sam? Brothers Richard and Steve Hanson have made no decision on that yet, so it seems possible that Sam could

play on and on and on ...

The four game line-up for Sam 8 includes Tynesoft's hit Winter Olympiad '88 with bob-sled, speed skating, ski jump, giant slalom and biathlon.

Quest has more than 90 screens full of tantalising puzzles and curious adversaries.

Around the World in 40 Screens features Repton action in Africa, the Arctic, the Orient, America and the Oceans and completing the collection is

Superior's arcade classic Mr Wiz. Sam 9 leads off with new game Camelot, the follow-up to Quest. This is particularly goods news for Electron owners, since it comes from writer Tony Dakden who reverses the usual process by programming on the Electron and converting to BBC Micro afterwards.

Two Superior successes, the Spy Catcher spoof Spy Cat and the Life of Repton are joined by Steve Davis Snooker to complete the Sam 9 line-up.

Sam 10 will see another new Electron game Qwak, an advanced ladder and platform offering from new young writer Jamie Woodhouse. Lead game is the old favourite Zalaga which came out top of the pops in a recent market research carried out by Superior. They are joined by Repton Thru Time and former Blue Ribbon title 3D-Dotty.

Each compilation sells for £9.95.

FEATURED in last month's *Electron User* was Rodeo Games, the latest offering from Tynesoft (091-414 4611). Now here's a taste of the graphics for this follow-up to the popular Circus Games.

Rodeo Games features bronco riding, steer wrestling, calf roping, trick shooting and knife throwing. It costs £9.95 for cassette and £14.95 on disc.

Gallup Software Chart

THIS MONTH	LAST MONTH	TITLE (Software House)	COMMENTS	PRICE
1	●	STORMCYCLE <i>Atlantis</i>	A chance to save the Earth from imminent invasion and disaster. You must find five diodes, kill the enemy and beat the clock.	1.99
2	▽1	SMASH & GRAB <i>Blue Ribbon</i>	If you're feeling especially villainous and dastardly you can break the law in this budget title. Playable and addictive.	1.99
3	▽2	TRIPLE DECKER <i>Alternative</i>	These games were originally listings in <i>Electron User</i> . There can be no argument about their value for money.	1.99
4	△12	JOE BLADE <i>Players</i>	The original mission for the community conscious Joe. You don't need to buy Joe Blade 2 to enjoy this arcade adventure.	1.99
5	●	FOOTBALLER OF THE YEAR <i>Kixx</i>	Originally from Gremlin Graphics and now a budget release. A good challenge but probably only for football enthusiasts.	1.99
6	△13	REPTON 2 <i>Blue Ribbon</i>	Not often seen on its own since its original release. If you like completeness then this should certainly be added to your collection.	2.99
7	▽4	JOE BLADE 2 <i>Players</i>	The graphics are good and the game very playable. The puzzle screens are difficult and this superb sequel will keep you busy for hours.	1.99
8	●	DEATH STAR <i>Blue Ribbon</i>	New to the budget market, this transports you to another planet on a rescue mission. Good shoot-'em-up. Fast moving and compulsive.	1.99
9	△16	COMMANDO <i>Encore</i>	This should be added to your collection immediately. A shoot-'em-up which is everything you would expect.	2.99
10	●	LAST NINJA <i>Superior</i>	Well packaged and attractively presented. The only full-priced game in the chart provides nice graphics and enjoyable gameplay.	9.95
11	▽10	GRAHAM GOOCH TEST CRICKET <i>Alternative</i>	Originally released last year by ASL, it is more suited to its budget price. Only recommended if you can't wait for good weather.	1.99
12	△15	KARATE COMBAT <i>Blue Ribbon</i>	As with sports simulations, martial arts never die. This is a better than average implementation and good armchair exercise.	2.99
13	●	FRANKENSTEIN 2000 <i>Atlantis</i>	Back in the charts after its long sojourn at number one. An interesting mix of Inner Space and Fantastic Voyage.	1.99
14	●	REPTON <i>Blue Ribbon</i>	The first setting for the little green friend. If you didn't acquire this originally or in its various forms since - do so now.	2.99
15	▽9	THRUST <i>Firebird</i>	An old favourite which is deceptively simple. Thrust has been keeping people glued to their screens for years. Skillful manoeuvring required.	1.99
16	●	MINI OFFICE <i>Alternative</i>	The only non-games title in the charts and now released on a budget label. Features word processor, database and spreadsheet.	2.99
17	●	STEVE DAVIS SNOOKER <i>Blue Ribbon</i>	Sports are well represented this month and this is a classic. Destined to remain a best seller as long as Steve continues winning.	1.99
18	▽3	RAVENSKULL <i>Blue Ribbon</i>	An excellent arcade adventure which was superb on its original label. At this price it has to be a bargain.	2.99
19	●	CREEPY CAVE <i>Atlantis</i>	A strange place to lose your keys, but stranger things have happened. Fun, colourful and enjoyable romp.	1.99
20	●	GRAND PRIX <i>Alternative</i>	If you fancy your chances as a racing driver this is a safe way to try your skills, though nothing particularly new.	1.99

The Yuppy Electron

WE all use databases every day of our lives, perhaps without realising it. They are an essential aid for storing and recalling information like facts and figures, names and addresses, telephone numbers, records, tapes and so on.

Manual systems like a card index are reliable, but very slow when it comes to finding a simple fact in a large array of cards and sorting them into order. A computerised system offers many advantages, not the least speed of access and compactness.

This listing turns the Electron into a powerful electronic card index system, allowing you to design and create a personalised menu-driven database, specifying its size, the information to be held and how it is indexed and presented on screen. The only requirement is a disc drive, either DFS or ADFS.

When run the program presents you with the menu screen in Figure I on which an option can be highlighted using the up and down cursor keys and selected by pressing the Return key.

On choosing the Create a database option - making sure there is a disc in the drive - you'll see a screen similar to Figure II where you can design the structure of each card in the index. The number of records (cards) and fields (subheadings) are set and you can name each field and specify its length.

Once this is done you can open the database and start filling in the cards. Figure III

Richard Blythe's handy database enables you to store and retrieve information with ease

shows the menu screen on opening a file called Phone Book. Here are options for adding, altering and deleting records, printing the whole file and searching for a particular item.

On selecting Add a record you are prompted to enter the data into each of the fields defined and the Search option is used to examine the records. Figure IV shows the result of searching the example Phone Book file for a surname.

Notice that you don't need to enter the full text of the field or the first item, as substrings are found. In some cases there may be more than one match of the search item and pressing the spacebar takes you to the next one.

When finished with the database don't forget to close the file from the main menu to ensure that all the changes are written to disc.

So now you can throw away all your old manual card index files and bring them up to date with a powerful and flexible computerised one.

Unit 6 Acacia Close
Leighton Buzzard
Tel: 0525 383074

DO YOU USE SIDEWAYS ROMS?

Are you fed up with them raising page even when you are not using them?
Are you fed up with "unplugging everything before running programs"?
With our Multi-Rom Cartridge you only "select the Rom you need:

ROMPLUS-144

Sideways Rom Cartridge with Printer Buffer and Filing System
Fits into Plus 1/Rombox Plus slot - holds 7 Roms plus 32k Rom
Roms selectable from software on integral OS Rom
Compatible with PMS-NTU plus Font Roms
Electron User thought it an "excellent add-on" (August, 1988)
Romplus-144 costs just £39 + £15 for the 32k Rom
CARTRIDGES ARE MADE TO BE SWAPPED - ROMS ARE NOT!

THE MODE 7 SIMULATOR ROM

Gives FULL Mode 7 display facilities simulated in Mode 2
Includes Prestel terminal software - just add modem and RS243 adaptor
Compatible with screen poking software, e.g. Wordwise, Teletext
HIMEM at &7C00 with Master Ram board
Price £25 - includes disc based screen editor/carousel software on 3.5" ADFS or Tape (for DFS transfer) - editor requires MRB

MODE 7 ADAPTOR KIT

Bare PCB, ROM, parts list and layout £25 + £15 for case

ORIGINAL E2P SECOND PROCESSOR KIT

Bare PCB, Construction Notes - With software on tape...£15
or on 3.5" ADFS disc or Rom...£20

All prices inclusive of post, etc. Please allow 28 days delivery
Kits do not include parts - you buy them separately from Watford, Maplins etc.

JAF A SYSTEMS - Committed to the Electron
9 Lon-y-Garwa, Caerphilly,
Mid-Glamorgan CF8 1NL. Tel: 0222 887203

WE have looked at a vast number of routines for accessing the ADFS and DFS disc systems in this series. In the past few articles I have been documenting the low level osword calls for accessing floppy discs and now I'll continue the theme with a look at ADFS osword calls.

Several fairly simple osword functions can be performed with the ADFS in the Plus 3 and AP3. The first we'll examine simply reads the amount of free space on the disc and is identical to the *FREE command you can type at the keyboard.

As always, osword requires a block of memory to return information. Before calling &FFF1 the X and Y registers must be set to point to the start of this block. The A register is set to &71 - the *FREE function number - and the osword routine is called.

The free space can be printed out after retrieving it from the parameter block. Program I shows how this call may be implemented in Basic.

Another straightforward operation is reading the master sequence number which is printed to the right of the title when you catalogue a disc. It is incremented every time you write information to the disc. It isn't, in fact, a great deal of use, but the call also reads a status byte that does provide useful information. This status byte is a bit-mapped number and the adjoining table shows what each bit represents.

Bit	Meaning
0	Not used
1	Bad free space map
2	*DPT1.x flag
3	Not used
4	Not used
5	Winchester controller present
6	Tube being used by ADFS
7	Tube present

Program II is used to read this information in Basic.

Finally this month we take a brief look at the osword &72 call which is used to perform

Accessing the OS

In Part 7 of his series unveiling the mysteries of the Electron's discs Roland Waddilove shows how to use osword calls for accessing the ADFS

fairly low level - in other words simple - disc operations. Program III will allow you to examine the contents of a disc by reading one sector at a time and displaying it on the screen in both hexadecimal and plain Ascii.

The osword call to read sectors requires a 10 byte parameter block. The first byte is used by the disc controller for reporting errors and should be set to zero. If, after the call, you

```
10 REM Read free space
20 osword=&FFF1
30 AT=&71
40 X=&70
50 Y=&0
60 CALL osword
70 PRINT
80 PRINT "There are ";&70;"
  bytes"
90 PRINT "((";&70 DIV 1024;"k)
  free on this disc."
```

Program I

find that it has been changed an error has occurred and the new value is the error number.

Parameter bytes one to four contain the address at which to load the data read from the sector. Byte five holds the osword &72 function code and if we store a value of eight here it instructs the disc controller to read sectors from the disc.

We store the disc address of the sector in bytes six, seven and eight. This is simply the sector number counting from the start of the

Program II

◀ From Page 11

disc. There are 16 sectors in every track, so the address of track two, sector three, would be 2*16+3, or 35. The address must be stored most significant byte first, least significant

byte last in reverse 6502 fashion.

Parameter byte nine contains the number of sectors to read, and in our program, will be set to one. The last parameter, byte 10, isn't used, so is set to zero.

Run Program III and enter the hexadeci-

mal disc address of the sector to examine. Enter zero to start with the first sector. The first 128 bytes are displayed, and are followed by the next 128 bytes when you press a key. You'll be asked whether you want to see the next sector on the disc - press Y or N here.

```

Program III

NOW OUT!

The bright new magazine that shows you how easy it is to make your own video movies...

If you have a video camera - or just thinking of getting one - you'll find *Video Action!* your passport to an exciting new world. No dull technical reviews but pages packed with help and advice - written by experts in a language **anyone** can understand.

You'll find all you need to know about lighting, scripting, directing, sound dubbing... and the magic of desktop video - using a home computer to create titles and captions and generate your own startling special effects.

It's available at your newsagents now for £1.50. If you take out a 12 month subscription on the form below you'll save £5 off the normal price. (UK only)

Stuart Bain shows how to add a new graphics command to your micro's Basic language

THE Electron has a good range of powerful graphics commands, yet there are a few notable and annoying omissions. One is a fill command for painting large areas of the screen and the other is a fast circle routine.

A clever patterned flood fill can be carried out by entering John Geraghty's routine published in last month's issue. Now you can also add the missing circle command using

the machine code program presented here.

Enter and run the program to assemble the machine code in the spare memory pages &900 and &A00. At the end of the listing is a demonstration of the new star command – this will run automatically.

To use the circle command in your own programs simply enter NEW and either load or type in the program. The command syntax is:

```
*CIRCLE x,y,r,type
```

The variables *x* and *y* are the X and Y coordinates of the centre of the circle, while *r* is the radius. The last parameter, *type*, determines whether a filled or unfilled circle is drawn and should be either one (filled) or zero (unfilled). It is optional and if you leave it out a value of zero will be assumed.

The colour is set using the normal Basic GCOL graphics command. Examples of this new graphics function are:

```
*CIRCLE 640,512,300
*CIRCLE X,Y,1000/6,1
OSCLI"*CIRCLE"+RND(1000),RND(10
00),RND(400),1"
```

As you can see, the parameters can be numbers, integer or real variables, calculations or a mixture of all three. The routine can also be called using a complex OSCLI command.

There are two main sections to the machine code. The first part checks the text of the star command to see if it is CIRCLE. If so, it gets the parameters and calls the second section.

A SIN table is created in memory when the program is assembled. Each value is multiplied by 32 to make them whole numbers rather than floating point, and 32.5 is added to make them positive. The COS value can be calculated quite easily from the SIN value.

Two rom routines are used – EVAL at &ABEE and INT at &A3E4. The former evaluates each parameter, calculating its numeric value, and the latter is called to convert this value to an integer if it is a real number.

The addition of this new command further improves the Electron's already superb graphics facilities.

Going round the bend

SOFTWARE

THE Fourth Dimension is on to a winner here with the best golf simulation I've seen on the Electron. It is packed with features: Two superbly designed 3D 18-hole courses and all the hazards you would expect to find on the real thing, like trees, rough, bunkers and water.

The easier course, Cone Links, is quite a challenge and after mastering it you might just be ready for the second, Pine Isles, which is quite a different ball game altogether.

You can indulge in either strokeplay or matchplay. The idea with the former is to finish all 18 holes in the least number of strokes, while in matchplay the winner is the player who wins most holes.

Up to four players can take part with each selecting one of four skill levels from beginner to professional. The one selected dictates whether the physical hazards or wind

*Product: Holed Out
Price: £12.95 (tape)
Supplier: The Fourth Dimension, PO Box 4444,
Sheffield.
Tel: 0742 700661*

strength and direction influence your play.

For instance, as a beginner only the water will affect your shot, whereas as a professional you could be playing from a bad lie in deep rough into a strong headwind.

For all shots up to the green your view is from behind the golfer you control. On the right side of the screen is an information panel displaying details relevant to the hole. You select a club using the Z and X keys from a range of three woods, nine irons, a pitching wedge and a putter.

Next you set the direction to hit the ball by moving a cursor left and right across the course. Here you must also take into account the wind - represented by a circle with a line coming out of it which points in the direction the wind is blowing, while its length repre-

sents the wind strength.

When the shot direction is determined you set its power using a meter. As you press Return a sliding bar advances from zero to towards 100 per cent and hitting it again sets the percentage of power and causes your nicely animated golfer to jump into action and take a swing at the ball. Using Z or X instead of Return when the meter is advancing will put either a hook or a slice on the ball.

When the ball is hit, its shadow travels along the ground giving an impression of distance. The way it bounces and comes to a stop when it hits the ground is very realistic.

Sometimes the hole you are playing has a path running alongside or across it and if you are skillful enough you can play the stroke so that the ball bounces on the path, making it travel further.

A ball that lands in water is declared lost and you lose two strokes. Landing in a bunker produces two possible outcomes: It is either plugged or you have a good lie. The latter is still a difficult shot, but a plugged ball

REVIEWS

is sunk into the sand and is much harder to play.

When you reach the green the screen is redrawn and you view the action from above. The indicator in the panel now represents the slope of the green instead of the wind. The line drawn points downhill and its length shows the steepness of the slope.

Again when you have set the direction of your shot, adjust the power and watch the golfer swing into action. There is good realism here with the ball bouncing off the edge of the cup if you hit it too hard or running round it if you're a little off centre.

After each hole the score card is shown displaying everyone's progress. During strokeplay it shows each player's skill level, the number of shots and his score related to par. In matchplay the score is replaced by the number of holes by which a player is winning.

There is a lot more to this game than just

whacking the ball down the fairway. Each hole is a puzzle in its own right. You have to plan your shots carefully and take the utmost care in selecting the right club and power.

There are precise maps in the well documented instruction booklet to help you plan your strokes. There's also a very useful quick reference guide to the distances – in the air and along the ground – that the ball will travel when using the various clubs.

The graphics are cleverly done using dithered colours to produce pastel shades on a four colour screen. Sound is restricted to the swing of the club and striking the ball plus a few minor noises such as a splash when your ball takes a dive.

I thoroughly enjoyed this simulation. If you're a golfing fan wanting to keep your hand in – buy it. If you're not, still buy it – it will keep you entertained for hours and hours. This is a test of skill not to be missed.

Second Opinion

There have been many golf simulations for the Electron in the past, but none match up to this brilliant game from The Fourth Dimension. The 3D perspective graphics are stunning and the gameplay is interesting and varied.

It doesn't matter whether you're a golf fan or not, you'll still enjoy this challenging and skilful computer version.

Janice Murray

Product: Tank Attack
Price: £12.99 (tape)
Supplier: CDS Software, Nimrod House, Becket
Road, Doncaster DN2 4AD.
Tel: 0302 321134

TANK Attack is a micro-mediated board game for two to four players. The package comprises a top quality fold-out playing board, a total of 48 plastic tanks and armoured cars and a book of instructions.

The opening screen calls on you to select which of the four countries you want to take part in the conflict. My first few combinations were rejected without explanation. Close examination of the playing board revealed the cause – adjacent countries such as Sarapan and Calderon have a common border, as do Armania and Kazaldis. Opposing countries have a shaded no-man's-land separating their official borders.

By choosing the correct countries you can devise conflicts of increasing magnitude such as one to one, an alliance of two against one or a full blooded four country war. If you are using only two of the four countries you are given the opportunity to double the strength of your forces by using the spare tanks.

Once you have made your alliances you can get on with the job of placing your pieces in their opening positions. A solid blue line denotes the outskirts of each capital city and all vehicles start from within this line.

Other points of interest on the playing board are the repair centres to which tanks may be returned when damaged by enemy fire, the length of a vehicle's confinement being determined by the severity of the dam-

Wargamers' delight

age sustained. The Electron will inform you when you can return a vehicle to active duty.

On-screen headlines are displayed before each round in the battle – these comprise a news flash, a weather report and a political comment. Prevailing weather conditions can have a marked effect upon the movement capability of one or both armies depending on the location of the weather front.

Your link with the micro is your battle strength display. This shows how many active tanks and armoured cars remain and also

reports how many units are currently undergoing repairs. If these figures do not tally with the number of pieces on the board someone is cheating!

At the bottom of the battle strength screen are four icons, some of which will be animated. Only the active ones are available. By moving a pointer over them you can choose to move, attack the enemy headquarters or finish your turn and pass control to the next

Turn to Page 16 ▶

◀ From Page 15

player. Selecting the movement order icon activates a teleprinter which displays your total movement allowance for the turn. This can be divided up among any number of vehicles.

Once this section is complete you can engage the enemy or fire on the opposing HQ. Both types of vehicle have a maximum range of four board squares, with the Electron making accuracy adjustments to your shots based on the range at which you are firing.

As the battle develops you will eventually come within firing range of the enemy. The Electron asks you to input the armour types of the two units involved – there are three for tanks and two for armoured cars – the numbers embossed on the underside of each unit relate to its armour strength. Finally, you specify the range of your shot and battle can commence.

The view changes to that of an observer on a distant hill top. The tanks fire one shot each and the position of the explosion shows whether or not you hit your opponent or were indeed hit yourself. The teleprinter tells you of the degree of damage sustained by each vehicle. A repairable tank can be placed on a repair depot, but you will be asked to remove seriously damaged ones from the board and your tank tally will be adjusted.

When you reach the enemy HQ to deliver the coup de grás you must move on to the square itself as you are not asked for a firing range. This last shot of the conflict is always accurate and always decisive.

There is no need to go through the rigmarole of securing the remaining enemy buildings – the teleprinter display brings news that this has already been carried out and your victory confirmed.

Tank Attack is a superb program that really takes the leg work out of wargaming. By leaving the monitoring of repair times, damage assessment and weather reports to the impartial logic of the micro you can concentrate on what really counts – strategy.

Jon Revis

Second Opinion

Tank Attack is unusual in that it's a computer controlled board game. This is fine if you like this sort of thing, but it won't be everyone's cup of tea. I would have preferred to see the whole game played on the micro rather than half on the micro and half on the board.

Janice Murray

Hallmarked golden oldies

Product: Play It Again Sam 7

Price: £9.95 (tape)

Supplier: Superior Software, Regent House, Skinner Lane, Leeds, Yorkshire LS7 1AX.

Tel: (0532) 459453

PLAY It Again Sam 7 is the latest in an ever-increasing line of highly successful compilations from the Superior stable. The package features three cracking games from the past plus a superb brand new offering.

Starting with the newcomer first, **FireTrack** is probably the ultimate shoot-'em-up. It features amazingly smooth vertical-scrolling arcade action that starts gently and speeds up at just the right pace until only the best stand a chance of surviving for more than a few moments.

You fly a space fighter low over alien worlds blasting the locals' power nodes, junctions and computer centres, finally destroying the Devil Rock's eyes for a bonus. The action is fast and furious.

The graphics are stunning and give an amazingly realistic 3D effect that I wouldn't have thought was possible on the Electron. What's more, for anyone who can spare the concentration, a number of familiar shapes and features can be seen in the landscapes – a Pac-Man chasing power pills, the number 42 and many more. However, I had to be told about their existence – I was too busy

trying to avoid the squadrons of enemy ships swirling around me in weird and wonderful formations.

FireTrack takes the ever-popular concept of a shoot-'em-up, transfigures it and implements it faultlessly.

In **Bonecruncher** you play Bono, a little green dragon which lives in a castle by the sea. You have set up Bono's Bathing Company making skeleton soap, a commodity much prized by the giant sea monsters which bathe nearby. It's made from the bones of skeletons that can be collected from around the castle and boiled in your cauldron.

The castle is anything but a safe place. Not only are there trapdoors through which you can disappear without trace, but some skeletons haven't stopped moving yet and they're deadly. And giant spiders rush around the walls biting anyone who gets in their way. They will also eat any bones, so it's often a race to collect the skeletons before they do.

Finally, there are Glocks – large round ball-like creatures which love the smell of soap. When you have climbed up a stairway to supply another customer they – after a short

Fire Track: Faultless implementation of the shoot-'em-up concept

delay – all move in the direction of the stairs.

Although a Glook is not in itself harmful, it will crush you if you get in its way when it's moving. They may also block your route. However, you can push one, or take advantage of its movement, to suffocate monsters and turn them into skeletons.

Fortunately Bono's Bathing Company is not a one-man show. Your partner Fozzy is strong enough to hold monsters and spiders at bay, but he's not very bright. Always keep an eye on him to make sure that he is not trapped or wandering round in circles.

Bonecruncher will delight game players of all ages.

Snapper . Acornsoft's implementation of the ever-popular Pac Man, was one of the first games ever released for the Electron. As the every-hungry Snapper you must make your way around a maze chomping all the dots. Pursuing you are four bug-eyed baddies that initially follow pre-programmed paths, but before very long begin to converge on you.

Fortunately, there are four power pills, one at each corner of the maze, which you can munch to give yourself a limited period of invulnerability. The baddies now turn blue with fear and you can eat them for extra bonus points. But strike quickly, because the effect of the power pills soon wears off.

Snapper's gameplay does not offer great variety, but it is still very addictive.

Ghouls is, to my mind, the only disappointment. Although popular in its heyday, it falls well short of the other offerings' standard. It is a very basic platform game, similar in design to Manic Miner, but features none of its finer touches. The graphics are simpler, the keyboard is over-responsive and the gameplay could be better.

Like Manic Miner, Ghouls features a number of different levels, but the only real dif-

PLAY IT AGAIN SAM

ference between them is the layout – the graphic features seem identical from one screen to the next.

The sound effects are quite good, particularly when you lose a life and it also features a lively piece of music that plays when you

complete a level and a haunting melody while waiting for you to enter your name on the high score table.

Ghouls may appeal to dedicated fans of platform games, but so many better examples are available that it must be considered a makeweight for the three real stars of this compilation.

Martin Reed

Sound	8
Graphic	8
Playability	9
Value for money	8
Overall	8

Second Opinion

Like its predecessors, Sam 7 is a superb compilation that is excellent value for money – even if you have already got one or two of the titles.

The real gem is the previously unreleased FireTrack. This technically brilliant piece of programming makes a fine game which proves to be very fast and addictive. The other titles can be considered bonuses thrown in for free.

Janice Murray

Ghouls: A makeweight for the three real stars

Here's how you can get the very best out of your Electron

Within the pages of these three books you'll find ALL the information you need to fully harness the power of your Electron. They cover Basic, machine-code programming and the operating system, and between them they also show how to combine all three to create more powerful and effective programs.

For the give away price of just £7.95 for the three, these books represent exceptional value and are a must for any serious Electron user.

Electron Advanced User Guide

This detailed guide to the Electron's operating system is packed full of invaluable information. It shows you how to:

- Implement the powerful *FX/OSBYTE calls
 - Write your own paged roms
 - Program the ULA
 - Make every byte count where program space is tight
 - Use the Electron's exciting capabilities to the full by following the complete circuit diagram
- ...and much, much more.

This essential handbook will help you to exploit the full potential of your Electron. And for just £2.95, saving £6.50 off the recommended price, can you afford not to miss this offer?

Electron Assembly Language

The Electron Assembly Language reference guide will help you get to grips with machine code in next to no time. Whether you're a beginner or are already fairly proficient, there is something for you in this book.

It has over 200 pages packed with hints, tips and example programs on subjects ranging from basic hex, binary and decimal number theory and logical operators, through addressing modes, stacks and loops, to subroutines, jumps and calls.

Every aspect of machine-code programming is covered in this book in a friendly, readable style, and there's also a comprehensive index. If you want to get more out of your micro, but thought machine code was indecipherable, this is the book for you. *Save £3 off the recommended retail price.*

Getting started in BBC Basic on the BBC Micro & Electron

This is the ultimate guide available on BBC Basic. Written by a leading expert on the language, it will lead you through each Basic function in a simple, easy-to-follow style.

Whether you are a beginner or more advanced, there are examples of commonly-needed routines and neat tricks you can use to make Basic jump through hoops.

By working through its many examples you will gain a clear insight into structured programming and will quickly acquire the ability to use structured techniques in creating your own programs. *Save £3 off the recommended retail price.*

Only
£7.95 for all three

Perform a tape transplant

Ernest Howorth shows how to make up your own customised tapes from compilations

COMPILATIONS with as many as 10 full length games on one cassette tape have been around for some time now, and indeed, some are among the best sellers. Although most are good value for money, the software houses appear to be unaware of the difficulty we experience in finding a particular game in the middle of the tape.

Compared with discs, tapes take a long time to load, especially the more recent games featuring elaborate introductory graphics which have to be endured before the main program starts to load. It is frustrating, therefore, when valuable time is wasted finding the program on a long tape, so the following ideas may help.

The simplest solution if you have a tape position indicator is to remember to set it to zero at

the start of the tape and make a note of the various game start positions.

None of the software companies have got around to introducing coloured leader tape between programs, probably for cost reasons, but this would be very useful and is something we can do ourselves. It involves cutting and joining the tape, of course, but this will be explained later.

I suggest the best option is to split up the compilation and to transfer any worthwhile games you want to use regularly on to separate cassettes, each neatly labelled and ready to load. The operation is painless and can be carried out simply and for the cost of a 15 minute computer tape costing around 50 pence.

Good old Sam is not only playing again, now he's cheating as well. Unfortunately, the short cheat programs are even more difficult to locate, and with great advantage can be inserted before the start of the main programs.

This way you don't have to cheat, but if you're a bit rusty and decide to slow down the enemy blasters, or even start off with extra ammunition, at least you won't have to spend half the evening lining up programs. This also applies to joystick utilities.

If there is no built-in copy protection it is better to save programs directly on to blank cassettes. Cutting and joining tape is not difficult, but care is required as it is fragile and easily damaged. The slightest defect could prevent the program loading, but if you follow these guidelines all will be well.

The join is made by butting together two square cut ends of tape and applying a narrow strip of special splicing tape to the back – not the recording side which faces outwards. The surplus splicing tape must be trimmed accurately to the edges of the now continuous tape using a very sharp blade.

The operation is best carried out using a splicer which will hold the tape securely while the joint is made. Excellent kits are available for splicing audio tapes, containing everything needed including comprehensive instructions. Note that office cellulose tapes and the like are useless and will cause jamming and other problems.

If you are not confident of your ability then practise with an unwanted cassette first.

Start off with a blank C15 cassette. First apply the appropriate label, then with this side uppermost and the tape apertures facing you, ensure the tape is wound on to the left spool. You will have plenty of spare tape so turn the right hand spool a few turns anti-clockwise to wind forward to provide a short length of leader tape at the start of the transferred program.

Carefully draw out about 12 inches of tape

Tape is drawn out of the centre aperture and cut

Tape from the left spool is joined to the right spool of the new cassette

Turn to Page 20 ▶

◀ From Page 19

from the middle aperture and cut the mid point of the loop. The beginning of the program to be transferred from the other cassette should now be joined to the short length from the right hand spool

Now carefully position the cassettes so the tape can pass freely on to the right spool

when you turn it slowly anti-clockwise by hand. When the marked end of the program is reached cut the tape and join the trailing end to the other end from the new cassette, which can now be rewound and will be ready to load.

Always take up any slack tape before replacing the cassette in the recorder. Anything recorded on the reverse side of the tape will

now be useless. Remember that a join will interrupt a program no matter how well the splice has been made, so only record on uncut continuous tape.

Now comes the method to separate the chosen program from the compilation. There will be at least 18 inches of silent tape between each program and the cut must be made in the middle of this section.

With the cassette in the recorder use the *CAT command to locate the start of the chosen program. Now run the tape back to the finish of the previous program. You must stop the tape mid way between these two points.

This can be done by listening to the sound through the cassette recorder's speaker and timing the mid point by means of a watch that displays seconds. Take the cassette out of the recorder and mark the position of the cut by making a small hole. Eventually this will be joined to the right spool of the new cassette.

Now the cassette is returned to the recorder and the end of the program marked in the same fashion. Return to the mark at the start and make the first cut. The part of the tape with the program on can now be transferred.

Before joining up the cut compilation it might be a help in the future to splice in a short length of coloured tape.

You will find this an absorbing way of making up a library of your favourite games at a modest cost.

Surplus splicing tape is trimmed with a sharp knife

Andrew and Stephen Weir combine lively nursery rhymes and naughts and crosses

Rhyme and reasoning

TIC Tac Rhymes is a fun two-player educational game for young children. It combines nursery rhymes with the old game of naughts and crosses. After printing an instruction page the program presents a series of well known nursery rhymes and prints them on the screen one at a time as in Figure 1.

In the rhyme one of the words is missing and you have to type it in. Just type the letters without pressing Return or Caps Lk - you don't need them.

Each letter is represented by a short dash so you can tell how long the word is. If the word entered is the correct one you get to play one turn at naughts and crosses (see Figure 2). Get it wrong and you miss your turn and the other player has his chance to guess the missing word in a different rhyme.

The winner of Tic Tac Rhymes is the player who wins the game of naughts and crosses. When this happens a tune is played and you go right back to the beginning of the program. As the rhymes are randomly chosen you are unlikely to be asked the same ones again.

Many tunes are built into the program and are played when you correctly enter a word in a nursery rhyme or place a naught or cross. The musical sound effects and tunes can be turned on or off at any time by pressing the Copy key.

Adventures

By Pendragon

Time to reflect on milestones passed

THE time of year is upon us when it is getting too hot to joust and too late to ride a boar hunt. So what better idea than to sit in the cool of the unwashed castle and tackle a few old adventures that have been gathering dust on my shelves these years past.

If we look back over the last six years of the Electron's existence we can verily glory in the daze of text adventures which have been released for this 32k beauty. As each year passed adventure milestones were created which pushed the Electron just a little further beyond its limits.

Names which spring to mind must include the eternal Sphinx Adventure, which though annoyingly fiddly set a standard and still proves popular among Electron adventurers to this day. Another gem is the adaptation of the Crowther and Woods colossal cave, Classic Adventure. Though somewhat under-developed and including bugs, it remains as its title suggests, a classic.

Other pinnacles include the quirky Woodbury End. Epic marvels such as Wheel of Fortune and The Lost Crystal and Robico masterpieces like Myorem, Village of Lost Souls and Enthal Seven.

This treasure trove of games – many are still available – is reflected in the latest Reader's Top Twenty printed overleaf which includes adventures spreading over the entire era. I compile the chart by averaging readers' votes sent in for any text adventure available for the standard 32k Electron.

The next chart should appear in the December issue of *Electron User*, so if you wish to vote for your favourite adventure please do so by giving

marks out of 10 for originality, atmosphere, parser, complexity and value for money.

I have just received a scroll from Foxsoft Adventures to state the following price points affect I Spy Red, The Quest for the Golden Wombat and The Mathews Murder: 3.5in disc version £5.50, 5.25in disc version £4.99, tape version £4.95.

I have also received a missive from Sodasoft to say that its first adventure release for the Electron will be titled The Genesis Project. This is further to the news I imparted in the March 1989 issue of *Electron User*.

A further piece of parchment arrived from trusty Bill Trevelyan who explained the reason for the problems I had with the Potter Adventures' parser. Apparently the adventure only deciphered the first three letters of a command as a verb and the last three as a noun.

Hence my problem with TAKE COINS compared to the accepted TAKE COIN. The program would read TAK INS rather than TAK OIN. But of course that method would also fail with a command such as OPEN THROTTLE which would be deciphered as OPEN BOTTLE ... ho hum thank goodness for advanced parsers!

One of my Knights of the Round Table – Dragonrider Sir David Shephardson – has recently asked me to mention to the lady who rang him for help with Sphinx Adventure that his phone number is now ex-directory. Therefore could the lady concerned mail my castle with her query concerning the game and I will pass it immediately to David.

Finally, this month's featured map is of the opening scenario to Woodbury End. This should hopefully help many adventurers who are stuck at the outset of this unique experience in graphic/text adventuring. Next month I continue this series with a guide to the openings to Philosopher's Quest.

● That's it for this month, so until the dust clogs the keys, happy adventuring.

Overture and Beginners

During the past two and a half years I have explained the processes of getting started, mapping an adventure, puzzle solving, overcoming dead ends, mazes, parsers and have provided an extensive glossary of adventuring terms.

Now let's look at the bare bones of what goes into producing a good adventure. The better ones provide rich and finely honed text, rather like a good novel. One of the best – and earliest – ever written is the famous Colossal Cave by Crowther and Woods. This is available for the Electron in two forms: The already mentioned Classic Adventure and Level 9's superb Colossal Adventure (for 64k Electrons only).

The descriptions in this classic fantasy are some of the finest in adventuredom. To illustrate the excellence of this and to show the sort of standard you should be looking for in a quality adventure, read this excerpt from Colossal Adventure:

❶ You are on the edge of a breathtaking view. Far below you is an active volcano from which great gouts of molten lava come surging out, cascading back down into the depths. The glowing rock fills the farthest reaches of the cavern with blood-red glare, giving everything an eerie macabre appearance.

The air is filled with flickering sparks of ash and a heavy smell of brimstone. The walls are hot to the touch, and the thundering of the volcano drowns out all other sounds. Embedded in the jagged roof far overhead are myriad twisted formations composed of pure white alabaster which scatter the murky light into sinister apparitions upon the walls.

To one side is a deep gorge filled with a bizarre chaos of tortured rock which seems to have been crafted by the devil himself.

And there is much, much more of similar

quality and richness in the same adventure and others from the Level 9 stable.

Narrative quality is not the only element that goes to make up a good adventure. Topography is significant too, and must be consistent both with the rest of the contents of the adventure and within itself.

For instance, if you leave a dungeon via the North door and arrive in a murky chamber, you would expect to find yourself back in the dungeon if you exit via the South door.

Similarly, if you have scrambled down a slippery slope it does not necessarily follow that you should be able to go up again without some difficulty. Perhaps a rope tied round a boulder at the top may assist.

As another example, if you've cut a hole in a sheik's tent in order to escape, you should expect to find it still there if you return. If it had been repaired you would expect some explanation to be proffered if credibility is to be maintained.

Logic and consistency in topography is critical if the atmosphere is to be sustained and your enjoyment is not to be marred by illogicalities. Unfortunately, this is all too often the case with badly developed adventures.

Another element of good workmanship is the inclusion of plenty of interesting incidents and events. A static adventure, no matter how vibrant the text or how imaginative the land, can be a bore. This further example from Colossal Adventure should give you some idea of what I mean: "A little dwarf just walked round the corner, saw you, threw a little axe at you which missed, cursed and ran away".

Next month we will look at how a plot is created to sustain interest and make your quest enjoyable and most of all believable.

Readers' Hall of Fame

Blood of the Mutineers – Ray Bray

This solution provides specific answers to individual incidents and obstacles in the game.

Table: Push it against the door in the cabin, then climb it to the door using the irons.

Tricorn: Put the candle in it, wear it to initially climb the arm, then put it on the bolster.

Hanky: Put it in the colander, then wear the colander when climbing the ledge near the river. Also spit on the hanky and use it to polish the platter.

Candle: Put it in the tricorn. The candle is also used to rub on the boat pulleys.

Irons: Used to clamp the table to the door.

Arm: Used for climbing the rail from the cabin window. It is later found in the sea and can be used to help climb the ledge.

Map: Found in the secret drawer in the bed. Read it at the pool on the island.

Key: Opens the cabinet in the sleeping quarters.

Bolster: Found on the bunk. Dress it with the coat and tricorn to make a dummy.

Cook: Search him for the flour bag and the colander.

Flour bag: Used with the colander to scare Tom from the crow's nest.

Colander: As above but also must be worn to get past the brambles and to carry the hanky up the river ledge.

Spyglass: Fit the large lens first. Use at sea to find the arm and land.

Large lens: Used with the spyglass but also to light the wood at the bear's cave entrance.

Pulleys: On the deck and in the boat. They squeak, so use the candle to wax them.

Shrub: Cut away with the cutlass.

Boots: Remove them and use in the boat when it fills with water.

Cutlass: Carried from the start. Its uses are with the shrub and the snake.

Snake: It is in the lime tree. Throw the cutlass at it from above.

Brambles: Wear everything – including the colander – to get through them.

Boar: Follows you in the forest. Follow the map route and lose it at the rope bridge.

Lime: Eat it to stop your gums feeling sore.

Bear: Enter the cave. Wait until the whetstone is revealed. Then get the whetstone, go West and light the wood.

Wood: Found at the cove when the boat smashes up. Drop the wood at the bear's cave entrance

and light it on exiting.

Whetstone: Used to sharpen the cutlass.

Varan: Go up the tower in the courtyard. When Varan is in the North, push the statue. Go back and examine Varan for the star.

Tapstry: In the tower, get it to reveal the door.

Treasures: Ring, necklace, gold and the coin. Search the treasure to find the platter. Then polish it with the hanky and use it to signal from the top of the tower.

If you want to start doing more with your micro than just playing games, this package is your ideal introduction to the four most popular applications for professional computers. All the programs have been designed for simplicity, so even a child can use them. Yet they include advanced features not yet available on programs costing many times as much!

**Finalist for the Home Software
of the Year Award**

**Contains 32 page booklet giving clear,
easy-to-follow instructions on all 4 programs**

Word Processor: Ideal for writing letters and reports. There is a constant display of both time and word count, plus a words-per-minute display to encourage the budding typist! A unique feature is the double-size text option in both edit and printer mode—perfect for young children and people with poor vision.

Database: You use this for storing information, just like an office filing cabinet. Facts you have entered can be quickly retrieved by just keying in a word or part of a word. They can be sorted, replaced, saved for future use or printed out.

Spreadsheet: Enables you to use your micro for home accounts or pocket money records. It creates a display of numbers in rows and columns. Continuous updating is possible, and a changed figure can be instantly reflected throughout the rest of the spreadsheet. Your results can be saved, to be used for future updates, or can be fed into its associated program...

Graphics: Part of the spreadsheet section, it lets you draw bar charts, pie charts and histograms to give a graphic presentation of your statistics. Helps to give life and colour to the duller figures!

Write your own arcade smashes using the

ARCADE GAME Creator

Arcade Game Creator is a suite of programs for the Electron and BBC Micros. Taken from the pages of *Electron User*, it lets you into the secrets of writing fast-action arcade games, and provides you with a number of utilities to make design and programming easier.

Among the programs are:

- A Mode 5 sprite editor that lets you design your own multi-coloured characters.
- A selection of fast print routines that will move sprites both in front or behind other objects on the screen.
- Map generators that will squeeze a Mode 5 screen into 8 bytes!
- Scrolling maps.
- Score update and printing routines.
... and much, much more.

To help you make the most of the Arcade Game Creator, you will also get a comprehensive manual based on the original series.

Written in an easy to read style and with many illustrations and screen shots, it contains all the information you need to create and animate sprites, to design backgrounds and to link the two together into a complete arcade game.

If you are an aspiring games programmer, this is an offer you simply cannot afford to miss!

Galactic gladiators

Try your skill at **Duel**, a superb two player game by Neil Davidson

DUEL is set in the far future when space gladiators battle between the stars in their specially made space ships. In this two player game your spaceship is located on the left of the screen while your opponent's is on the right. Between you is empty space and a few harmless asteroids.

You can move your ship up and down using the A and Z keys and Control is used to fire laser bolts at the enemy on the other side of the screen. He uses the *, ? and Return keys. Force shields which surround both ships protect them from laser bolts, but their power is limited, as shown at the sides of the screen.

You can hide behind the asteroids for protection, but not for too long as it is possible to shoot holes in them. However, this is a dangerous play too, as your laser bolts may bounce back at you at first. Also watch out for passing flying saucers that fire indiscriminately. If you try to blast them with laser bolts they'll bounce them back at you.

PALACE of MAGIC MAP 1

By Hawk Hobbs.

The PALACE

Objects

-  BOOSTS ENERGY
-  HELPS PASS BISHOP (8,1).
-  HELPS PASS GUARDIAN (4,3).
-  PLACE AT (4,6) TO FILL WITH WATER. HELPS PASS FROBERT (4,1).
-  LIGHTS DUNGEONS.
-  HELPS PASS MONSTERS AT DUNGEONS (7,4).
-  USE AT LOCATION OF KEY TO CLIMB UP.
-  USE TO PASS KNIGHT (5,1).
-  GIVE TO BOY AT (6,1). SEE KNIFE BELOW.
-  USE AT LOCATION OF KEY ON BRIDGE.
-  HELPS TO JUMP DOUBLE-HEIGHT.
-  HELPS PASS IMP (6,1).

WHEN YOU GIVE THE BARK TO THE BOY, YOU WILL RECEIVE THE KNIFE. THIS CAN KILL SWIRLS IN A LIMITED TIME. (WATCH COUNTER AT TOP OF SCREEN USE AT (1,1)).

THE ADVANCED PLUS 3 MK II

The only fully compatible disc upgrade running Acorn's own filing system. The MK II is now supplied with 3.5" DOUBLE SIDED disc drive providing a storage capacity of 640K A.P.3. MK II gives you:

1. A fully Acorn compatible 1770 interface (Cartridge)
2. 80 track 3.5" disc drive, double sided (640K)
3. Separate PSU
4. Acorn ADFS Advanced Disc Filing System
5. Welcome disc
6. Utilities
7. Full documentation
8. All the advantages of the original Plus 3 PLUS extra ROM socket.

OUR TOP SELLING PRODUCT

NEW IMPROVED

Undoubtedly the most popular disc upgrade system for the Electron (Requires Plus 1)

Remember - 2nd drives (3.5" or 5.25") can be added and the AP3 drive can be used on a BBC or Master computer! Also most Electron disc-based software is supplied on 3.5" ADFS discs.

The only fully compatible disc upgrade running Acorn's own preferred filing system (supplied on: Plus 3, Master 128, Master Compact and Archimedes)

****EXTRA BONUS****
3 games on disc - SNAPPER - DRAUGHTS - REVERSI
COMPLETE PACKAGE ONLY
£129 excl VAT; £148.35 Inc VAT

ADVANCED PLUS 5

A unique interface for those wanting the maximum expansion from just one slot in the PLUS 1. AP5 contains:- a User port for connecting peripherals such as a mouse, 1 MHz bus allowing Music 5000(E), prommers and various control devices to be added. Tube interface for connecting an Acorn 2nd processor or even a Master Turbo board through a 'Co-Pro Adapter' - a TWO spare ROM sockets (1 high priority). All hardware connections are Acorn compatible thereby allowing many BBC products to be added (remember that some software modification may be necessary for the Electron). So although some expansion options may appear expensive on an Electron you do have upward compatibility.

£58.00 Ex VAT; £68.24 Inc VAT

ADVANCED PLUS 1... The plus 1 is the main expansion for the Electron. It provides the Centronics parallel printer, port, joystick interface and 2 cartridge slots into which go ROM cartridges including View, ViewSheet, Pascal, Logo and our own popular range of disc upgrades.
£50.00 excl VAT; £57.50 Inc VAT

ADVANCED PLUS 6... a fully buffered 6 ROM expansion module for the Electron user. AP6 is fitted inside the advanced Plus 1 or a modified Acorn Plus 1 (when used with the Acorn Plus 3, 5 ROM sockets are available). All sockets are designed to accept either ROM/EPROMS or RAM chips. A further feature is the optional AP7 upgrade!
"A marvelous piece of design... don't hesitate, buy it!" - *EU, May '88*
£33.00 excl VAT; £37.95 Inc VAT

UPGRADE SERVICE for the original Acorn Plus 1 to Advanced Plus 1 and AP6. This will provide all the benefits of AP6 and also includes the printer circuit modification for some model printers. (AP6 can be fitted to original Plus 1 by users with soldering experience) for upgrade service.
£70.00 excl VAT; £80.00 Inc VAT
Incl. Mod. Fitting & Testing & Carriage. Send to: P.R.E.S. Service Department, PO Box 34, Shipley BD17 6DE

ADVANCED ROM ADAPTER 2

An Acorn approved cartridge containing a card with special 'zero' profile sockets that allow you to fit compatible 8k or 16k EPROMS/ROMS. The cartridge is fully enclosed providing complete protection for your ROMS. Simple to use - No switching - complies fully to the Acorn (sideways) ROM filing system.
The best ROM cartridge is by far the AR2...
£13.90 excl VAT; £14.95 Inc VAT

ADVANCED BATTERY-BACKED RAM

A standard Acorn approved cartridge but containing 32k (2 x 16k) of sideways RAM. The added bonus is the battery-backed feature that holds the RAM contents when the power is switched off! Different ROM images can be loaded into either bank from ROM images previously saved. The banks can also be locked to imitate ROM use. Now it is possible to have View & ViewSheet in one cartridge every time you switch on. Other uses include £600 ADFS, printer buffer, ROM software development. The use of ABR is simplified by the newly written PRES software utilities which include:- SaveROM, LoadROM, Lock, Unlock, Printer Buffer, Zero and MakeROM a new utility to put your own software from disc or tape into ABR & use the ROM filing system. All software is supplied in ABR with a simple menu to transfer the utilities to your own media. No hardware switching - totally software controlled. Instructions for using supplied software and necessary information for users developing their own applications.
"It's a superb add-on and a must for all serious Electron users"...
Electron User

£39.00 excl VAT; £44.85 Incl VAT

PRES POLICY

1. To provide the best possible service & assistance to users.
2. Supply Acorn based or Acorn compatible products & to enable upward compatibility wherever possible.
3. Provide tested products with special attention to quality of design, components & production.
4. **Only to cash cheques & credit card receipts when we know we can supply the goods ordered.

DISC INTERFACES (Plus One required)

AP3 INTERFACE: As supplied with AP3 package. A fully Acorn compatible disc interface that will accept any standard 5.25" or 3.5" 80T drive with PSU. It runs Acorn's ADFS (as supplied on Acorn Plus Three, Master 128, Master Compact and now the Archimedes) supplied with A.D.F.S. manual and welcome disc + Utilities and 3 bonus games (please specify 3.5" or 5.25" 80T format). Also provides a spare 16K ROM socket.
Price £52.00 ex VAT £59.80 Inc VAT

AP4 INTERFACE: A fully Acorn compatible disc interface that will accept any standard 5.25" or 3.5" drive with PSU. It runs the 1770 DFS (as fitted in the BBC 'B' and Master) keeps pace at £600 - has utilities in rom and provides a spare 16K ROM socket (DFS manual included).
Price £60.83 ex VAT £69.95 Inc VAT

AP34 INTERFACE: Get the best of both filing systems. Now available from PRES the ultimate interface. Fitted with both Acorn approved filing systems... Acorn's current standard ADFS and Acorn 1770 DFS (which can be run at £600) ADFS and DFS manuals supplied + ADFS welcome disc with utilities.
Price £69.55 ex VAT £79.98 Inc VAT
Please state 5.25" or 3.5"

ADVANCED PLUS 2 ROM

We feel this is one of the best, low cost, additions we have produced for the Electron & +1 user, especially for Plus 3, AP3 & ABR users.

Now with this easy to fit upgrade you can add:

1. Fix for Tape filing system in Hi-res screen modes.
2. "ROMS" - to display all ROMs/ROM images present on the system.
3. "UNPLUG" - disable ROM/RAM image.
4. "INSERT" - enables or inserts a previously unplugged ROM.
5. "KTYPE" - to totally disable the Plus 1.
6. "LOCK" - to lock sideways RAM bank in ABR, AQR, AP7.
7. "LROMS" - to lock all sideways RAM banks found.
8. "UNLOCK" - to unlock sideways RAM bank in ABR, AQR, AP7.
9. "UROMS" - to unlock all sideways RAM banks found.
10. "SAVEROM" - saves a copy of a ROM image to the current filing system.
11. "LOADRUN" - loads a ROM image from the current FS into a RAM bank.
12. "FORMAT" - will format an ADFS disc for Plus 3 or AP3.
13. "VERIFY" - reads and tests every sector on an ADFS disc.
14. "VFORM" - formats and verifies an ADFS disc in one command.
15. "BUILD" - creates a text file that can be used by "EXEC" (ie IBOOT).
16. "LIST" - displays a numbered listing of a text file.
17. "TYPE" - displays a file on screen with line numbers.
18. "DUMP" - to view a file's contents on screen.
19. "LANG" - selects a default language to be booted on <CTRL-BREAK>
20. "HELP" - provides a full 'help' list on all the ROM's commands
STOP PRESS
21. "AQRPAGE" - selects the specified page in any AQR present.

Now there is no need to search for your utilities disc every time you want to Format/Verify a disc, Build a Iboot file or Lock/Unlock/Load a ROM image into ABR PLUS much more... the ideal companion from the company that produces the Acorn Plus 1.

£11.00 ex VAT; £12.65 Inc VAT

"The AP2 is the definitive Plus 1 Rom... I'm not sure what I'd do without it... Like all of PRES's other products it's been well worth waiting for." *EU July '88*

PRES ABR SOFTWARE

The new PRES ABR software now available separately containing: SaveROM, LoadROM, Lock, Unlock, Printer Buffer, Zero and MakeROM a new utility to put your own software from disc or tape into ABR & use the ROM filing system. Supplied on 3.5" ADFS or 5.25" DFS disc.
£35.99 ex VAT; £11.49 Inc VAT
5.25" £39.99 ex VAT; £10.34 Inc VAT

ADVANCED PLUS 7

An internal battery-backed RAM upgrade for the Advanced Plus 6. TWO 16K pages of Sideways RAM, battery-backed and featuring full write protect facility. Just like ABR but fitted internally & vacating a cartridge slot. This product is compatible with all Acorn BBC/Master & Electron computers.
£39.50 ex VAT; £45.42 Inc VAT

** USER PORT **

A new low cost unit for those who just require a user port interface. Supplied in a standard size, Acorn approved cartridge, with the standard connector on top. Inside is a spare ROM socket which can also be configured for high priority use such as mouse software.

£19.99 ex VAT; £22.95 Inc VAT

ADFS VERSION 1.1

Suitable for existing Plus 3 or A.P.4 users. This new version has the software fixes for Zsyshelp, write protect disable & compaction. Also Winchester code has been replaced with the necessary driving software to handle AQR as a 256k RAM DISC. Please note - ADFS is Acorns adopted standard filing system supplied on the Plus 3, Master 128, Master Compact & now the Archimedes. Supplied on 16k ROM with Welcome disc & utilities. Please state 3.5/5.25 welcome disk.

£14.95 ex VAT; £17.19 inc VAT
(ADFS manual supplied separately)

ADFS E00

For Electron users with either Plus 3 or A.P.4 and 32k of SW RAM i.e. ABR. All the benefits of ADFS but without all the loss of RAM! Includes all the software 'fixes' as in version 1.1 as well as the AQR/RAM DISC code and an FX call for managing the new & original ADFS. One of the most frequent questions we are asked: "How do I get back the memory lost on my Plus 3 system?" Answer: Press ADFS & E00 regains 3.75k leaving page @ &E00 the same as ADEL

ADFS E00 supplied; 3.5" ADFS (manual available separately)

£14.95 ex VAT; £17.19 inc VAT

5.25" ADFS (manual avail. sep.) £14.00 ex VAT; £16.10 inc VAT
5.25" DFS (2 discs + ADFS manual) £19.00 ex VAT; £21.85 inc VAT
(See Special Package Prices)

AP4 MOD

This converts an AP3 to an AP34 (ie. DFSE00) supplied as a two chip set, full documentation and fitting instructions.

£21.74 ex VAT. £25.00 inc VAT

ADVANCED GAMES COMPENDIUMS - ON DISC

With many of our products providing more 'serious' add-ons for the Elk; we thought it was time to allow easy access to some of the favourite games ON DISC! ... Three volumes of popular games, previously only available on tape, now 'instantly' loadable from menu on disc. Each volume contains EIGHT menu selectable games. Available on 3.5" ADFS or 5.25" ADFS.

Vol. I	Vol. II	Vol. III
Invasers	Felix and the Fruit	Danger UXB
Jaf Power Jack	Monsters	Ghouls
Killer Gorilla	The Mine	Felix and the Evil Weevils
Stock Car	Rubble Trouble	Adventure
Bandits @ 3	Swag	Swop
Bumble Bee	Cybertron Mission	Cheer
Cooker	Moonrader	Galactic Command

MUSIC 5000

Turns your Electron into a computerised music production studio in which you can take a piece of music all the way from a sheet score, an idea of your own or one of the supplied examples, through entry, arrangement, replay and 'live' mix-down to a finished performance complete with custom instruments and studio effects.

MUSIC 5000 is supplied as a powerful, stereo, digital, eight voice, 16 channel synthesiser with ROM software (containing the AMPLE language), disc software containing the example music files and full documentation. The requirement for Electron Music 5000 is ... Electron, Plus 1, disc system (3.5 or 5.25 drive) running DFS or ADFS (preferably @ &E00) i.e. Acorn Plus 3, A.P.3 or A.P.4, 1 MHz bus (best option A.P.5), and hi-fi amplifier or similar. (Music 5000 has a standard 5-pin DIN audio connector for sound output). (Please state disc size & FS when ordering) £99.00 (ex. VAT) £113.85 (inc. VAT)

A clever little beeper

Teach yourself Morse Code with Paul Keddie's useful utility program

THE second program that many people write when they first start Basic programming on their Electron is a Morse Code tutor – the first being a character definer. Over the past five years we have seen dozens of code tutors, but Paul Keddie's is a clear winner.

When you run it you'll be presented with the menu screen. Press 1 to read the instructions and 2 to display the alphabet alongside its Morse equivalent. Pressing 3 takes you to the converter which allows you to convert text into dots and dashes.

You are prompted to input a word which the program then displays letter by letter on the screen. The Morse Code is shown alongside as a series of dots and dashes while it produces the correct sounds via the internal speaker.

Option 4 will print out the codes on the printer and pressing 5 will quit the tutor and return you to Basic.

The program runs in Mode 1 and to enable it to work on ADFS disc systems like the Plus 3 and Pres AP3 which set page to &1D00, a downloader is incorporated into the listing. This means that when the program is run the disc system will be disabled, so remember to save your typing first. Tape users won't experience these problems as there is plenty of memory to run the tutor.

By entering words and carefully listening to each letter you will soon become a quite proficient beeper.

The Morse Code alphabet

Don't miss out on the mass of material that's appeared in *Electron User* over the past few months. Bring yourself up to date with this back issue bundle, packed with games, utilities, features and programming tutorials.

Here's what you'll find in the November 1988-April 1989 bundle:

December 1988 issue:

Games: Santa's Warehouse. Blow football. Senet board game. *Utilities:* Cut phone bills. Predict the pools. *Features:* Tape problems cured. Osfle routines explained. Floating point maths made easy. *Reviews:* Sam 4, Joe Blade, Frankenstein.

January 1989 issue:

Games: Sheep dog trials. *Utilities:* *WIPE command for ADFS users. Retirement fund planner. *Features:* Game cheats, pokes and tips. Screen scroller. Elkview noticeboard. *Reviews:* Play it again Sam 3, By Fair Means or Foul, Golden Figurine, Pegasus disc interface.

February 1989 issue:

Games: Slippery Sam. *Utilities:* Supercharge your programs. Verify tape programs. *Features:* Random access filing. Adventure hints. Reverse Polish tutor. *Reviews:* Pixel Perfect DTP. Preparing for breakdowns.

March 1989 issue:

Games: Taktiks, Trivia Test, Bomb Disposal, Sprog. *Utilities:* Search and Replace, Poetry. *Features:* Map of The Nine Dancers. Disc directories explored. *Reviews:* Repton Infinity, Question of Sport, Zenon, Last Ninja, Advanced File Manager.

April 1989 issue:

Games: Diamonds - a mind bending puzzle. *Utilities:* Pattern fill routine, automatic program saver, Home Finance Manager. *Features:* Input routines explained, disc drives revealed, palindromic numbers explored. *Reviews:* Sam 6, Exile, Orbital.

May 1988 issue:

Games: Eliminator. *Utilities:* EZ Type, DFS disc formatter. *Features:* Tournament sorts, Party Cocktail Creator, Landscape Designer, Fractal Generator. *Reviews:* Barbarian II, Circus Games, Superman, Mode 7 Simulator Rom.

MICRO MESSAGES

Machine code conversion

I OWN an Electron and Plus 1 and have subscribed to Electron User for four years. I think it is an excellent magazine and I especially like Micro Messages, Arcade Corner and 10 Liners.

I think the magazine could be improved by awarding small prizes to those readers who send good letters, cheats, programs and so on. I like the new format of the magazine and the new style of listings.

Anyway, enough of that. Is it possible to enter character definitions in hexadecimal or binary?

Also, is it possible to make a program that converts machine code to Basic or vice-versa as sometimes one version of a program is shorter and therefore easier to type in than the other. An example of this is the Kaleidoscope program that you published in your February 1987 issue.

Are any of the following games available for the Electron: Boffin, Boffin 2, Impossible Mission, Impossible Mission 2, Jet Set Willy 1, Beach Head 2?

I recently bought a Slogger Expansion Rom 2.0 and joystick interface and noticed that the expansion rom had the command `RSAVE` to save rom images to disc or tape. Does this work with software cartridges?

What do you type in to use this command,

as the manual says:

```
*RSAVE R(id) (filename)
```

which does not work. Are the brackets meant to be there or is something else wrong?

For anyone having trouble with Quest, try pressing R, E, I, N, C, A, T simultaneously. This gives four reincarnations. In Codename: Droid, does anyone know how to get the jet-pack on level 3, sector 2? — Alexander Bowyer, Hexham, Northumberland.

● Character definitions can be entered in hexadecimal by preceding each number with an ampersand. It is possible to write a Basic compiler that turns a Basic program into machine code, but no one has yet written one.

Boffin and Impossible Mission are available, but the other games aren't.

`RSAVE` can be used to save the roms in cartridges and the syntax of the command is the same. The brackets aren't required and to save rom seven with the filename `FRED` you would enter:

```
*RSAVE R7 FRED
```

In the April and May 1988 issues of Electron User we published complete maps of Codename: Droid. These may help you find the jet pack.

Who Kung-Fu?

COULD you tell me the name of the software house that produced the game called *Ye-Ar Kung-Fu*? I have looked through numerous magazines which advertise games, but to no avail. — Graham Bonner, Cambridge.

● The game was written by Pete Johnson and was released by Imagine.

Free tape wanted

YOUR magazine is brill, but I have a complaint. Many other computer magazines, such as *Crash* and *Your Sinclair*, give a lot of demonstration games away with the magazine on the front cover. Could you do it once or twice a year or perhaps give something else away for free?

Also, does Roland Waddilove work for Alternative Software? — Ross Adams, Shirwell, Devon.

● If you take out a yearly subscription to Electron User you will receive a free tape

every month. This features many games and utilities from the magazine.

It has all the monthly listings on it and we will certainly consider putting some demonstrations on it, too, if the opportunity arises.

As for Roland, we woke him up to ask him about his relationship with Alternative and he assures us that he does not have a part time job there. Alternative has bought Electron User's 10 of the Best games and is releasing them on its budget label.

Many of the titles were written by Roland and are taking the Gallup software chart by storm.

Scoring on the screen

AS a keen fan of sport simulations I am wondering if there are any other football simulation games apart from Goal! I have played Match Day 1 on the BBC Micro and Match Day 2 on the Commodore 64 and think both are excellent. Are they to be released on the Electron?

I watch ice hockey quite often. Are there

any other games other than Bug Byte's Ice Hockey, which I think is a good attempt at portraying the game? — Jason Turner, Willerby, Hull.

● A number of soccer simulations have been released over the last few years, including Brian Clough's Football Fortunes, League Challenge, Football Manager, Footballer of the Year, Supreme Team, Soccer Supremo and Mexico '86. Some may be difficult to find so shop around. There are no plans at the moment to convert Match Day.

We haven't seen any ice hockey simulations on the Electron. Can any readers help?

Taking a break

I READ with interest the letter from Mr Buckler in your March issue on !Boot startup files for View. I use a similar file on all my View discs.

I would imagine that the reason he wants to disable the Break key is that if you are using Mode 3 to get 80 columns on the Edit screen and accidentally hit the Break key not only does the computer revert to 40 column Mode 6, but your chosen text and screen colours become the default white on black.

I found this extremely irritating until I hit on the idea of adding the following line to my !Boot files:

```
*KEY10 MODE 3|N|S13000
```

If Break is pressed accidentally, Mode 3 is reselected and the default colours are changed back to my chosen ones of yellow on black. — Michael Cowgill, Retford.

Linking the daisies

I WOULD like to connect my Amstrad daisy-wheel printer to my Electron Plus 1. Is this possible? — Cameron Francey, Dumfries, Scotland.

● All you need is a printer lead. The Electron will work perfectly well with either a dot matrix or daisywheel printer.

Time share printer

I HAVE an Electron with a Slogger Rombox Plus and an Advanced Plus 3. My father uses an OKI Microline 192 Plus printer at work during the week. It is not used at weekends and he has told me that I can use it if there are no modifications needed.

It has two ports, the RS232 which is the

Turn to Page 40 ►

◀ From Page 39

one used in its present roll and the Centronics port. Can you tell me if it will work? — James Edwards, Bingham, Nottingham.

● The Rombox Plus has a Centronics parallel port at the rear of its case. You should be able to connect this to the Microline's via a standard printer cable.

Electronic building

I AM writing in the hope that you can help me trace a program which was, I believe, an early listing in your magazine. The program was called House and involved systematic building of a house using simple presses of the spacebar. It was ideal for very young children. — Christopher Price, Merton Court School, Sidcup, Kent.

● This program was originally published in The Micro User Educational Special. Unfortunately, it is no longer available as it is out of print and we haven't got any more back issues.

However, it is still available on tape along with many other good educational programs in the special Fun School package which is available for £9.95. To obtain a copy use the order form on Page 51.

Keys to Frak! designer

A COUPLE of years ago I bought the game Frak! which I still find very addictive. Unfortunately I have lost my copy of the instructions and have racked my brains trying to remember how to access the screen designer.

I wrote to Aardvark Software a couple of months ago asking for a new set of instructions, but still have not received an answer. Can you help? — David Morland, Glasgow.

● We published the screen designer keys in the July 1988 issue of Electron User.

Trying to strike lucky

PLEASE can you tell me if the games Empire Strikes Back and The Living Daylights are available for the Electron. I have scanned up and down the pages of Electron User but the only mention I can find is for the BBC Micro. — Owen Lewis, Bridgend.

● Unfortunately these games were not converted to the Electron. The main problem is one of speed. A Turbo version may be possible, but sales may not justify the work and expense involved.

All programs printed in this issue are exact reproductions of listings taken from running programs which have been thoroughly tested.

However, on the very rare occasions that mistakes may occur corrections will be published as a matter of urgency. Should you encounter error messages when you type in a program they will almost certainly be the result of your own typing mistakes.

Unfortunately we can no longer answer personal programming queries concerning these mistakes. Of course letters about suggested errors will be investigated without delay, but any replies found necessary will only appear in the mail pages.

Behind is a problem

I HAVE been reading Roland Waddilove's excellent series on sprite graphics and have appreciated it very much. I am now in the process of designing my own game and although I understand the sections about foreground and background printing I cannot work out how you go about printing a sprite in front of some things yet behind others.

For example, in Spycat the character walks in front of the background, but behind the collectable objects. I would be very grateful if you would tell me the principal of the code allowing you to do this. — Matthew Chilton, Cumnor, Oxford.

● The technique is to use the foreground print routine, printing the sprites in a set order and erasing them in reverse order when they are to be moved.

For instance, if you wanted Spycat to walk in front of a building but behind a dustbin on the pavement, Spycat is first printed on top of the background — the building — using the foreground print routine, then the dustbin is drawn on top of Spycat using the same routine. Spycat then looks as if he is between the dustbin and building.

When Spycat moves the dustbin is first erased, Spycat is reprinted at the new position and the dustbin replaced. Again, only the foreground print routine is used. In this way Spycat appears to walk behind the dustbin but in front of the building.

Electron on video

THE other day I was having a good look at my Electron and noticed a video socket. Please could you tell me what to use it for and where I can obtain a lead? — B. James, Cinderford, Glos.

● Any Acorn dealer — such as Watford Electronics — should be able to supply a suitable

lead. It provides a monochrome output which can be used with a monochrome monitor.

Fishing for assistance

I AM having problems loading the Fishing program which was published in the June 1986 issue of Electron User. When trying to get the program to load the counter starts at 01. When the program has loaded it gives a Bad program message.

At first I thought the tape was at fault, but all the other programs on it work perfectly. Is there any way that the game can be rescued?

I would also like to congratulate Mithras Software on its swift service. After waiting two months for The Nine Dancers from another software house I received the game in just three days. — Craig Campbell, Stirling, Scotland.

● It sounds as if you have a tape fault at the start of the Fishing program. You may be able to salvage the listing by loading what you can and typing in again the parts that are missing or corrupted.

Assuming PAGE is at &E00, enter:

```
*OPT1,0
*LOAD "" E00
OLD
!TOP=&FF0D
```

This will recover as much as possible from the tape.

Loading pictures

I WOULD like to know how to load pictures from cassette section by section in the same way that they do on the Planets and Island demonstrations on the introductory cassette.

Is a digitiser available for the Electron? If so where can I obtain it and for how much? — Gareth Jayne, Gloucester.

● The technique used to load the pictures section by section is to open the file with OPEN and to read it one byte at a time using BGET. Each byte is poked into the screen memory as it is read.

A digitiser isn't available for the Electron.

Moving solution

COULD you please help by answering a few of my questions? How do you program keys such as X, Y, A and Z on the Electron so they move an object? I can program the cursor keys, but not the letter keys.

Can I find out how much memory is left in the computer when I have got a program in it? Could you tell me how to turn the sound on and off?

Is it possible to put a time limit in a pro-

gram at the point where there are inputs and the computer waits for a key press?

Finally, what does the command *T. do? I've seen it in many programs. Thanks for the help. — M. Stacey, Derbyshire.

● Using one key combination is exactly the same as any other. Here is a short example program that moves an asterisk around the screen under the control of the A, Z, N and M keys:

```
10 REM Use A,Z,N & M
20 MODE 4
30 VDU 23,1,0;0;0;0;
40 XX=20 : YX=15
50 REPEAT
60 PRINT TAB(X,Y)";*";
70 AX=XX : BX=YX
80 ks=INKEY$0
90 IF ks="A" THEN YX=YX-1
100 IF ks="Z" THEN YX=YX+1
110 IF ks="N" THEN XX=XX-1
120 IF ks="M" THEN XX=XX+1
130 PRINT TAB(AX,BX) " "
140 UNTIL FALSE
```

The amount of memory left once a program has been loaded can be found with:

```
PRINT HINER-TOP
```

The sound can be turned off with *FX21,0 while *FX21,0 turns it back on again.

You can wait for a keypress within a time limit using INKEY\$ followed by the time to wait in hundredths of a second like:

```
10 MODE 6
20 PRINT -
30 PRINT "Press a key..."
40 ks=INKEY$200
50 IF ks="" PRINT "Too slow!" ELSE
PRINT "You pressed ";ks
60 END
```

The *T. command is used to select the tape file system. Disc drive owners will use it when loading programs from cassette.

Expanding into discs

I AM a proud owner of a 32k Electron. I have a considerable number of tape-based games, but now I would like to expand into discs and word processing with a printer.

Is this possible, and could you tell me where I might be able to find a printer and disc drive? No one in my area stocks Electron equipment. — Peter Grove, Telford, Shropshire.

● Pres can provide you with all you'll need. The first add-on to buy is a Plus I as this is essential for both a printer and disc drive. Then you have the choice of printer and disc filing systems.

A good economically priced printer is the Panasonic KX-P1081. There's not much to choose between the ADFS and DFS filing systems, so we'll leave that decision to you. A 5.25in drive is best with DFS and 3.5in drive with ADFS.

Journey expedited

I am trying to get somewhere with Superior Software's excellent game, Exile. It is a true programming marvel, although I have seen very little of the game because I am stuck almost at the start.

My current position is just under the surface of the planet in the huge central cavern. I cannot get any further into the cave system than this and have been unable to get anywhere for several weeks, if not months.

Can anyone help before I cause some serious damage to either myself or my Electron because of the frustration?

I would like to add that I like the new format, and the quality of listings, especially the utilities, is extremely high. I have been reading

Electron User for almost three years and it has been a constant source of help and reference. Keep up the good work. — Stewart Maguire, Midlothian, Scotland.

● You'll need to blast your way into the underground cave system with a grenade. From the start fly as far to the right as you can and land on the ground. Walk left until you find the grenade which should be lying next to a bush. Pick it up.

Go the large cavern under the spaceship and throw the grenade to the floor, remembering to keep a safe distance when it goes off. You can then proceed through the hole you've made.

Rugby conversion

I HAVE a copy of the game Soccer Boss and think it's great. However, I am also a keen rugby league supporter and would like to change the program to make it into a Rugby League Boss. Please could you tell me which lines I would have to change to carry out the task?

The data should be two divisions consisting of 18 teams with 25 players and a transfer list of 20. The most that one team can score in one game is 35. And don't forget that in Rugby League you get two points for a win and not three as in soccer. — A. Jennings, Wakefield, West Yorkshire.

● Unfortunately, it is not possible to convert Soccer Boss into a Rugby Boss simulator without a great deal of work — far too much to list here. Do any readers know of a commercial program on the market?

Electron to be upgraded?

I WOULD like to praise Slogger for its reliable hardware and friendly advice when I asked which was the best way to upgrade my Electron.

I would like to recommend Jaffa Systems' excellent Mode 7 simulation rom. It is a bargain at £25 and gives you full Mode 7 capabilities. If you use it with Slogger's Master Ram Board you can run all BBC Micro text adventures such as Lord of the Rings without any problems.

It has come to my notice that the Electron is no longer for sale. This is because the large stocks that were built up have come to an end. Maybe if enough readers wrote, Pres would try to buy the rights to the machine from Acorn and produce more Electrons.

More memory, speed and so on, perhaps even more sound channels, would bring the

Electron up to the standard of other micros.

I have compared Electron User to other computer magazines and it is clearer, more colourful and not so games-orientated. It has a good balance and variety. Keep up the good work. — Andrew Gwynne, Legbourne, Lincolnshire.

Knockout blow

I RECENTLY bought a copy of The Way of the Exploding Fist. I was very excited as I had searched high and low to find it. When I got home I found that it was a version for a BBC Micro and not an Electron.

I tried it anyway but as I had expected it did not work. I cannot take it back to the place where I bought it from as I have lost the receipt. What do you suggest? — Dean Stevens, Tipton, West Midlands.

● Try contacting the software company directly, explaining that you bought the BBC Micro game by mistake and ask if you can exchange it for an Electron version.

Trouble with Superman

I RECENTLY bought Superman — Man of Steel for my Electron. Although I like the game very much it became a nuisance having to rewind the tape to the file Start at the end of a game. Is there any way of avoiding this?

Could you please tell me how to get rid of the spaceship on level one, because I have read the instructions but I can't see anything about this? — Andrew Woodward, Cawood, North Yorkshire.

● You can't alter the way Superman loads from tape, and this does spoil what is otherwise an excellent game. The spaceship is a concussion cannon and can be punched or hit with your heat vision. Several hits may be required to destroy it.

Get this slimline
solar calculator,
PLUS the monthly
tapes
— when you
subscribe!

FREE!

A subscription to *Electron User* is incredible value for money. With it you get the latest issue delivered to your door before it's in the shops PLUS a program packed cassette with each magazine.

And now you get even more for your money because when you subscribe you'll also get the exclusive, Database Publications transparent calculator, worth £7.95.

Actual size

Using state-of-the-art technology this calculator has an invisible membrane keypad, runs from solar cells (so you'll never need any batteries), and because it's only the size of a credit card it fits easily in your wallet or pocket.

So what are you waiting for? Subscribe today for only £19, and as well as getting the calculator and ensuring you receive Electron User each month, with the free tape you'll get programs that work correctly — the first time!

SAVE £7.95!

RRP £9.95 OFFER £7.95
(Please state age-range required)

UNDER 6'S A suite of eight programs is available for this age group from counting 1-2-3-4-5, through spelling and guessing games. Children are encouraged to master the likes of numeracy, literacy and concentration.

6-8 YEARS For this age group, programs are devised to provide various levels of difficulty from words and numbers to coordination and logical thinking.

OVER 8'S Older children face the challenge of an adventure game combined with a series of short puzzles. Seven of the programs are self contained but each of these has to be solved before the eighth title can be loaded.

ADVANCED USER GUIDE Only £1.95!

CUMANA DISC DRIVE INTERFACE ONLY £4.95!!

Fit to one of the ROM Cartridge slots on the Plus one console, allowing you to attach a 5.25" disc drive with its own power supply unit.

ELECTRON MAINS ADAPTOR Only £9.95!

We can offer attractive discounts for all educational establishments, phone or write for a quote.

We supply a catalogue of our entire stock range per machine type with every order.

Dept. EU69, C/O Northwood House,
North Street, Leeds, LS7 2AA.

NEW RELEASE

CAMELOT
A New Release from Superior
Sixty action-packed screens
pitting you against
demons, witches and the
knights of the Round Table.
Can you find Camelot and
rescue the King's daughter?
CAMELOT takes you where
CRACKS and QUEST left off.

SUPERIOR
APPROVED

STEVE DAVIS SNOOKER
The No. 1 Hit from CBS
Play a hand of Steve Davis
in your computer. Choose
your own balls, spin and
direction, speed, spin and
power, then watch the balls
slip in the pockets.
"There have been snooker
simulators before, but this is
the best". - A & B Computing

SPYCAT
The Spycatching Smash Hit
All the thrills and intrigue of
the world of espionage,
which even "the book"
couldn't reveal!
"One hundred screens of
fantastic puzzles and unusual
adventures... Spycat is a very
amusing game". - Acorn User

THE LIFE OF REPTON
Superior's No. 1 Hit
Repton returns to fill an 80
screen odyssey in his story
from baby to old-age
paranoid. Also includes
screen and character edition
screens and character edition
screens. "Micro user
probably won't be
...Micro user"

PLAY IT AGAIN SAM 9 for the BBC Micro and Acorn Electron
